

# Product information

## DeavX Gastro

The DeavX Gastro from PB is a very effective and simple solution for clean and safe tap water from the squeeze shower. This solution is ideal for kitchen applications where larger volumes of water are required.

The filter is designed to be mounted under the sink, directly in front of the tap of the squeeze shower, in the cold water supply. By placing the filter for your squeeze shower, you are protected against legionella bacteria at this tap point.

The squeeze shower filter is equipped with an automatic forward flush. During this operation, all captured particles are flushed from the filter into the sewer. This means there is no clogging in the membranes and the filter lasts longer.
