

Product information

DeavX Res

The apartment filter from PB is specially designed for use in apartments. The filter module is placed centrally (after the water meter). In many situations this is in the meter cupboard of the apartment.

Perfectly suitable for:

The filter module is compact and therefore requires little space. This makes it suitable for use in small (technical) spaces.

- Apartments
- Housing associations
- Holiday homes

By applying a filter module per residential unit, management, control and prevention of bacteria like Legionella becomes much more accurate. Because the filter is placed when the water enters (e.g. meter cupboard), pollution and bacteria do not have a chance to enter the apartment.

Details

Additional add ons

- Blowdown valve
- Watershock absorber
- Prefilter, manually
- Prefilter, automatic

Art. nr.	Description	Dimension HxWxD (cm)
1105075510	UFK 90-350	62x28x14
1105110750	UFK 110-750	126x31x16

* For drinking water at 16°C and a water pressure of 2 bar.

Delivered including

- Manual valves 2x
- Manometer 1x
- Filter clamps
- Check valve
- Prefilter (200micron)
- Connection using three-part couplings
- Timer and solenoids (230 V AC / 24 DC)
 - Optionally available without timer and solenoid
