UF/MB/TAP YFF

The UF/MB/TAP YFF filter modules are the solution for OEMs seeking reliable, compact water treatment solutions. Thanks to the advanced hollow-fibre SevenBore® membrane technology and a pore size of just 0.02 microns, this filter provides crystal-clear and micro-biologically safe water. Perfect for small drinking water applications, wastewater treatment, and process water purification. In 2023, PB added the complete UF/MB/TAP portfolio of Veolia Water Technologies & Solutions, making this module exclusively available from us.
